

# Space occupying lesion

Entity: Cluster

<b>Concept description:</b>		<b>Identification:</b>			
unknown		<i>Id:</i> openEHR-EHR-CLUSTER.exam_space_occupying_lesion.v0 <i>Reference model:</i> openEHR_EHR			
Purpose	Use	Misuse	Copyright	References	Contact
Archetype to register presence and type of space occupying lesions in various organs. This archetype is used in the context of Eurotransplant.	<p>The archetype must be used in slots in other archetypes of Eurotransplant. These archetypes are:</p> <p>openEHR-EHR-CLUSTER.exam_gall_bladder_and_bile_duct.v0.adl  openEHR-EHR-CLUSTER.exam_kidney.v0.adl  openEHR-EHR-CLUSTER.exam_pancreas.v0.adl  openEHR-EHR-CLUSTER.exam_liver.v0.adl</p> <p>Regarding Space Occupying Lesion-cluster: It contains inside this cluster a Status-item and a CodedText with the same name as the cluster. The status item (also coded text) contains only one item: "Not investigated", it is optional, as also is the other coded text. Because the archetype model, currently, does not support dependent conditions, it must be used in this way: - It is important to understand the following: Like a business-rule following must be noted: A coded text must be used if the status-item is not used. On the other hand, if the status-item ("Not investigated") is used, the other coded text in the same cluster will be ignored by the software. There is also "Lesion Type", a list of values, which lists most commonly used lesion-types, and it contains a free text, which can be used for any remark in this context. When one or both are used, the Space</p>				

	Occupying Lesion-cluster must not have used the status-item ("Not investigated") and it must have the list of values in the other item of this cluster set to "Yes"
